In the Claims:

Kindly amend the claims as follows:

- 1-4. (Canceled)
- 5. (Previously Presented) Method for manufacturing components made in one piece, which appear in a weaving machine, comprising one or more first and second parts, said parts being manufactured in separate first and second parts and being joined together to form a whole by means of processes which practically do not change the cross-section of said parts, wherein said first and second parts have:
 - -different mechanical and/or magnetic and/or tribological properties; and/or
 - -a different manufacturing method; and/or
 - -different shape properties
- according to their functional requirements in the component, wherein said component is a hook (1b), comprising:
 - a first part (4a) consisting of a stamped piece of material, which may be covered by injection moulding;
 - -a second part (4d) consisting of a flat piece of material having adequate magnetic properties, so that it may be influenced by a magnetic selector;
 - -a third part (4b) consisting of a stamped piece of spring steel;
 - -a fourth part (3) consisting of a flat piece of material available on the market; and
 - -a fifth part (4c) consisting of a stamped piece of material.

- 6. (Previously Presented) Method for manufacturing components made in one piece, which appear in a weaving machine, comprising one or more first and second parts, said parts being manufactured in separate first and second parts and being joined together to form a whole by means of processes which practically do not change the cross-section of said parts, wherein said first and second parts have:
 - -different mechanical and/or magnetic and/or tribological properties; and/or
 - -a different manufacturing method; and/or
 - -different shape properties
 - according to their functional requirements in the component,
 - wherein said component is a lancet, comprising:
 - -a first part, consisting of a stamped piece of material having an appropriate shape;
 - -a second part consisting of a strip having a cross-section corresponding to that of flat steel; and
 - -a third part, consisting of a stamped piece of material, designed to be fixed in a lancet holder.
- 7. (Previously Presented) Method for manufacturing components made in one piece, which appear in a weaving machine, comprising one or more first and second parts, said parts being manufactured in separate first and second parts and being joined together to form a whole by means of processes which practically do not change the cross-section of said parts, wherein said first and second parts have:
 - -different mechanical and/or magnetic and/or tribological properties; and/or
 - -a different manufacturing method; and/or

-different shape properties

Oct 27 06 08:45a

- according to their functional requirements in the component,
- wherein said component is a heddle (10b), comprising:
- -a first part (13a) made of wire material or flat steel;
- -a second part (14) consisting of a stamped piece of material; and
- -a third part (13b) made of wire material.
- (Previously Presented) Method according to claim 7, wherein said second part at 8. one of its two sides ends in a cylindrical extremity having the same diameter as the wire material of the first (13a) and/or the third part (13b).
